

# Implementation

## 1. On a dedicated page embed the code.

## 2. In the HEAD section:

```
<script>
  !function(e,n,t,r){
    function o(){try{var e;if(("string"===typeof this.response?
JSON.parse(this.response):this.response).url){
      var t=n.getElementsByTagName("script")
[0],r=n.createElement("script");r.async=!
0,r.src=e.url,t.parentNode.insertBefore(r,t)}}catch(e){}}
    var s,p,a,i=[],c=[];e[t]={init:function(){s=arguments;var
e={then:function(n){return c.push({type:"t",next:n}),e},catch:function(n){
  return c.push({type:"c",next:n}),e}};return e},on:function()
{i.push(arguments)},render:function(){p=arguments},destroy:function()
{a=arguments}},
  e.__onWebMessengerHostReady__=function(n){if(delete
e.__onWebMessengerHostReady__,e[t]=n,s)for(var
r=n.init.apply(n,s),o=0;o<c.length;o++){
  var u=c[o];r="t"===u.type?r.then(u.next):r.catch(u.next)}
p&&n.render.apply(n,p),a&&n.destroy.apply(n,a);for(o=0;o<i.length;o+
+)n.on.apply(n,i[o])};
  var u=new
XMLHttpRequest;u.addEventListener("load",o),u.open("GET","https://"r+".webloade
r.smooch.io/",!0),u.responseType="json",u.send()
}(window,document,"JobPal","YOUR APP ID")
</script>
```

## 3. In the end of the BODY

```
<script>
  JobPal.on('ready', function(){
    JobPal.startConversation();
  });
  JobPal.init({
    region: 'eu-1',
    appId: 'YOUR APP ID',
    menuItems: {
      imageUpload: false,
      fileUpload: false,
      shareLocation: false
    }
  }, {
    customText: {
      headerText: 'How can I help you?',
      introductionText: 'You are welcome to contact us!'
    }
  });
</script>
```
